EDUCATION

University of California, Berkeley

Bachelor of Arts in Computer Science

Relevant Coursework: Software Engineering, CSS Fundamentals, Modern Web Design, Data Structures and Algorithms, Computer Security, Operating Systems and Systems Programming, Database Systems

SKILLS

Programming Languages & Frameworks: HTML, TypeScript, React, React Native, PHP, Python, Sass, Tailwind, SQL

Tools: git, GitHub, Figma, Storybook, LaunchDarkly

RELEVANT EXPERIENCE

Frontend Developer Contractor, *Create*

November 2024 – January 2025

- Created fully reusable and accessible UI components utilizing React, TypeScript, Tailwind, Storybook, and Radix UI
- Built out the UI for an updated dashboard side panel component, significantly enhancing the navigation experience and improving functionality within the product
- Visually updated pages and user flows to align with the company's updated design guidelines

Full Stack Developer, *Motus*

June 2018 – June 2020

Full Stack Developer

June 2018 – June 2020

- Developed two customer-facing full stack web applications by planning out and executing the development of the user client, API, CMS, and database for each project
- Collaborated with the company designer to create and prototype responsive layouts and translated them into production code
- Maintained and updated legacy projects by refactoring the codebase and creating documentation

Resto Facil

May 2019 - January 2020

- Designed and built an API serving as an access point to Motus's existing POS system utilizing PHP
- Developed a dashboard used for managing restaurant tables, orders, inventory and payments in real time utilizing the LAMP stack
- Implemented a user permissions system used for managing user privileges and actions

SCMI

June 2018 - June 2020

- Designed a database used for storing temperature, humidity and energy consumption readings taken from customer refrigeration equipment utilizing MySQL
- Developed a user dashboard used for monitoring the latest sensor readings, sensor remote control and sensor configuration utilizing the LAMP stack
- Implemented customizable user themes for the web client

PROJECTS

Ticketdex, *Personal Project*

October 2024

- Designed and built an IOS application utilizing React Native Expo intended to help concert goers manage their tickets locally on their phone
- Utilized the Google Places Autocomplete API to help users easily input the venues address for an event
- Implemented functionality that allows users to store tickets in PDF format, image format, or in the form of an external link to another app

WORK EXPERIENCE

Sous Chef, *Cellarmaker Brewing Company*

September 2023 – September 2024

- Lead a team of 5 cooks by training them on proper food handling, new and existing kitchen procedures, food quality and presentation standards, and by directing back of house operations during service
- Maintained effective communication with the front of house team by exchanging key information about order delays, customer food allergies and dietary preferences, 86'd items, and directing orders to the correct tables to ensure customer satisfaction
